

FULLY INTEGRATED HARDWARE AND SOFTWARE

THE TOPAZ™ SL & ANDROID SL SERIES

TOPAZ Digital is revolutionizing the way businesses deploy digital signage, unlike other manufacturers who only build the hardware which then requires you to source a separate software solution TOPAZ Digital provides an **All-in-one, fully inclusive solution!**

Our hardware & software engineers work together to deliver a truly optimized solution built from the ground up ensuring all elements work in harmony together it also allows us to move away from the traditional Windows based PC & remove a lot of the issues that regularly come with that set up.

By doing this TOPAZ Digital gives you the peace of mind that one vendor is responsible for ensuring your solution works, no longer do you have to rely on multiple vendors and identifying the component at fault, the TOPAZ solution is integrated to provide all the hardware & software functionality you need in one product from one vendor.

It is also **FULLY INCLUSIVE** meaning that everything is included on day one, there are never any recurring costs to worry about!

We are continually adding new functionality to our software platform for the benefit of all users, below are just some of the highlights our software equips you with to control the hardware element of our solution

Android OS

Wireless Connectivity

Content Management System

24/7 Usage

Integrated Speakers

Wide Viewing Angle

Images, Video & Music

FULLY INCLUSIVE

We are continually adding new functionality to our software platform for the benefit of all users, below are just some of the highlights our software equips you with to control the hardware element of our solution:

Power on/off via the software. Users are able to remotely turn the unit on and off via the software. You can also schedule when the unit turns on and off during the day to save energy!

Volume Control – You can remotely manage the volume of the unit with a click of a button!

Brightness – Increase or decrease the brightness easily via the software.

Switch Input Source – Switch between Digital Signage mode and HDMI via the software. In case you wanted to add a set top box to show sporting events.

Sleep Mode/Wake Up Mode – Put the display to sleep and then be able to wake the display up when needed from anywhere in the world.

Stop/Play – Stop and Play functions like you would a DVR.

These enhancements help customers manage their network of digital displays not only locally but remotely via the internet through the TOPAZ CMS software.

DIGITAL SIGNAGE MADE EASY!
