Review – GolfShake

"I got the opportunity to test out the fat tyre trike at a charity golf event in Derbyshire. As a hilly and ruggedly beautiful course, Matlock offered the perfect opportunity to put the golf trike through its paces. I used the trike for the first nine holes, knowing that elevation changes prove a challenge to most conventional golf course vehicles."

"The first thing that struck me about the fat tyre trike golf trike was its design. First and foremost, the design is great. I don't ride motorcycles but felt immediately at ease when shown the controls of the trike. It is very stable and glides across the turf easily. The throttle is fly-by-wire like on most top of the range quad bikes and while it's incredibly sensitive, it is nonetheless easy to use. The trikes are powered by a powerful 1.5kw lithium battery, have hydraulic disc brakes all round, forward and reverse gears, lights and even a horn."

"Because they only weigh 95 kilograms and have just three wheels, they have very little impact on the golf course. Side slopes mean that two wheels take the majority of the weight of the trike without losing stability. I was amazed at the gradients that it could cope with."

"I am not sure I would be happy using it on the road but on the golf course it is simply BRILLIANT. It is agile, fast, versatile and, above all, incredibly fun."

"The golf bag fits easily and simply to the rear holder, allowing you to concentrate on your game without worrying about it falling off."

"The step-through foot rests make it very easy to get on and off the machine. It also appealed to our younger competitors who were just as keen to give it a try as those who saw it as a way of giving them greater longevity. They look tremendous and my trike attracted massive interest as I made my way around the course."

"I can see these being very popular at stay and play venues, adding to the existing fleet of conventional buggies."

"I have tried hard to think of any downsides to this electric golf trike, but I'm genuinely struggling to think of any. They speed up play, are incredibly stable, look great and are, above all, very easy to use."
